780~1100nm TGG Based PM Dual stage Optical Isolator

The Optical Isolator is characterized with low insertion loss, high isolation, high return loss, excellent environmental stability and reliability. It has been widely used in lasers, transmitters and other fiber optics communication equipment to suppress back reflection and back scattering.
If you do not see a standard isolator that meets your needs, we welcome the opportunity to review your desired specification and quote a custom isolator. Requests for custom fiber pigtails, different wavelengths and handling power of operation or other specific needs will be readily addressed.

3. The pass optical power is 2 W only for connector added.

4. Type B: Both axis working, Type F: Fast axis blocked, the default is Type B if without request.

Order information   P/N: PMISO-B/F-①-②-③-④-⑤-⑥-⑦

When you inquire, please provide the correct P/N number according to our ordering information dual and attach the appropriate description would be better. If need any connector, we do not recommend choosing a 250μm bare fiber pigtail. For high power applications, we recommend direct splicing without connectors.
